

HospiTrack Deployment Checklist

Quick reference for deploying to Render

☒ Pre-Deployment (Already Done)

- [x] All bug fixes completed
 - [x] Code tested locally
 - [x] Data files ready (us_er.parquet, triage_model.pkl)
 - [x] Deployment files created (render.yaml, Dockerfile.prod)
 - [x] .gitignore configured
 - [x] 10 commits ready to push
-

☐ Step 1: Push to GitHub (YOU DO THIS)

```
cd /home/ubuntu/hospitracker
git push origin main
```

Authentication Options:

- [] GitHub CLI: `gh auth login`
- [] Personal Access Token: <https://github.com/settings/tokens>
- [] SSH key: `git remote set-url origin git@github.com:JZembower/HospiTrack.git`

Verify: <https://github.com/JZembower/HospiTrack/commits/main>

☐ Step 2: Deploy on Render (YOU DO THIS)

One-Click Deploy:

1. [] Visit: <https://render.com/deploy?repo=https://github.com/JZembower/HospiTrack>
2. [] Connect GitHub account
3. [] Service name: `hospitracker`
4. [] Click "Create Web Service"
5. [] Wait 8-10 minutes

Your Public URL:

```
https://hospitracker-XXXX.onrender.com
```

Write it here: _____

□ Step 3: Verify Deployment (TEST THESE)

3.1 Health Check

```
curl https://hospitracker-XXXX.onrender.com/healthz
```

Expected: {"status": "healthy"}

- [] ☒ Passed

3.2 Landing Page

URL: https://hospitracker-XXXX.onrender.com/

- [] Hero section loads
- [] 3 feature cards visible
- [] Medical disclaimer shown
- [] No console errors

3.3 Find Care Page

URL: https://hospitracker-XXXX.onrender.com/static/home.html

- [] Form loads correctly
- [] Symptom dropdown works
- [] Location input accepts text
- [] Search returns results

Test Case:

```
Symptom: Chest pain  
Location: San Francisco, CA  
Radius: 50 km
```

- [] Returns hospitals list
- [] Map shows markers
- [] Distance calculated correctly

3.4 Explore Page

URL: https://hospitracker-XXXX.onrender.com/static/explore.html

- [] Map loads with hospitals
- [] Shows "Found 4088 hospitals"
- [] Hospital names NOT "Unknown Hospital"
- [] State filter works
- [] Sorting works

3.5 Demo Page (ML Triage)

URL: https://hospitracker-XXXX.onrender.com/static/demo.html

- [] Form submits successfully
- [] Returns triage level
- [] Shows confidence score
- [] Recommendation displayed
- [] Medical disclaimer visible

Test Case:

```
Complaint: Chest pain
Age: 45
Severity: High
Heart Rate: 110
BP: 160/100
ML Mode: ON
```

- [] Returns Level 2 or similar
- [] Confidence > 70%

3.6 API Documentation

URL: <https://hospitracker-XXXX.onrender.com/docs>

- [] Swagger UI loads
- [] All 5+ endpoints listed
- [] Can test endpoints interactively

☐ Step 4: Performance Check

4.1 Response Times

```
time curl https://hospitracker-XXXX.onrender.com/healthz
time curl https://hospitracker-XXXX.onrender.com/api/states
```

- [] Health check < 200ms
- [] API calls < 2s

4.2 Mobile Responsiveness

- [] Open on mobile browser
- [] Layout adjusts correctly
- [] Map is interactive
- [] Forms are usable

☐ Step 5: Monitor & Document

5.1 Check Render Dashboard

- [] View logs for errors
- [] Confirm health checks passing
- [] Check memory usage (<512 MB for free tier)

5.2 Document Your URL

Add to README.md:

Live Demo

 ****Public URL:**** <https://hospitracker-XXXX.onrender.com>

Features

- Find emergency care by symptoms
- Browse 4,088 US hospitals
- ML-powered triage demo

5.3 Share with Stakeholders

Subject: HospiTrack **is** Live! 

The HospiTrack application **is** now publicly accessible:

<https://hospitracker-XXXX.onrender.com>

Key features:

-  Find Care - Search hospitals by symptoms and location
-  Explore - Browse 4,088 US emergency rooms nationwide
-  Demo - ML-powered triage recommendations

Technical details:

- Platform: [Render.com](https://render.com)
- Backend: FastAPI + Python 3.11
- Frontend: Multi-page responsive design
- Data: 4,088 hospitals **with** quality scores
- API: RESTful **with** Swagger docs at /docs

Please test and provide feedback!

Troubleshooting

Build Failed

- ☐ Check Render logs for specific error
- ☐ Verify Dockerfile.prod is in repo
- ☐ Ensure data/ and models/ are committed

Health Check Failed

- ☐ Wait 2-3 minutes for startup
- ☐ Check logs for Python errors
- ☐ Verify PORT env variable is set

No Hospitals Found

- ☐ Increase radius to 100 km
- ☐ Try coordinates: lat=37.7749, lon=-122.4194
- ☐ Check console for errors

Geocoding Timeout

- ☐ Expected for some addresses
- ☐ Recommend users click “Use My Location”
- ☐ Or enter lat/lon coordinates

ML Demo Error

- [] Verify `ML_DEMO_ENABLED=true`
 - [] Check `models/triage_model.pkl` exists
 - [] View logs for model loading errors
-

Support Resources

- **Detailed Guide:** `ACTUAL_DEPLOYMENT_STEPS.md`
 - **Quick Start:** `QUICK_START.md`
 - **Architecture:** `DEPLOYMENT_FLOW.md`
 - **Render Docs:** <https://render.com/docs>
 - **GitHub Repo:** <https://github.com/JZembower/HospiTrack>
-

Deployment Complete!

When all checks pass:

- [] Mark deployment as successful
- [] Share URL with team
- [] Monitor for 24 hours
- [] Plan for upgrades if needed

Congratulations! HospiTrack is now live! 🎉
